

Patient Name: Robert Taylor

Date: 10/06/2023

Symptoms:

- Shortness of breath
- Persistent cough
- Wheezing
- Fatigue

Findings:

Chest X-ray indicates hyperinflated lungs and flattened diaphragm, consistent with chronic obstructive pulmonary disease (COPD).

Pulmonary function test (PFT) reveals decreased FEV1 and FVC.

Diagnosis:

Chronic Obstructive Pulmonary Disease (COPD)

Medications Prescribed:

- Salbutamol inhaler
- Tiotropium
- Prednisone (short-term)

Recommendations:

- Smoking cessation
- Pulmonary rehabilitation
- Follow-up with pulmonologist
